Yuga Rajan S

Senior Software Engineer · .NET · Agentic AI

SUMMARY

Senior Software Engineer with nearly five years of experience building enterprise applications, ERP systems, multi-tenant SaaS platforms and AI-powered products, from architecture and technical design through implementation, migrations, deployment and production support. Strong in multi-tenant and distributed architecture, domain-driven design, authentication and authorization, asynchronous and serverless processing on Azure, and database performance. Own delivery across four enterprise products and mentor four junior developers. Currently focused on agentic AI: multi-agent orchestration, RAG, knowledge graphs and tool integration through the Model Context Protocol.

TECHNICAL SKILLS

AI engineering	Multi-agent systems, agentic workflows, RAG, LLMs, Azure OpenAI, LangGraph, LangChain, LangSmith, MCP servers, tool calling, human-in-the-loop, AI memory, vector search (Pinecone, pgvector), knowledge graphs (Neo4j), AG-UI, CopilotKit
Backend and APIs	C#, .NET 8, ASP.NET Core, ASP.NET Core MVC, Entity Framework Core, LINQ, Node.js, Express.js, REST API design, Swagger
Frontend	TypeScript, JavaScript, Vue.js 2 and 3, React, Pinia, Vuex, XState, TanStack, Zustand, Zod, Vite, Webpack, Tailwind CSS
Data	SQL Server, query optimization and tuning, stored procedures, views, DbUp migrations, MongoDB, aggregation pipeline, Mongoose
Cloud and async	Microsoft Azure, Azure Functions, Durable Functions, Storage Queues, Blob Storage, Hangfire, Azure DevOps CI/CD, serverless and queue-based processing
Security	OAuth 2.0, OpenID Connect, JWT, identity providers, RBAC, policy-based authorization, 2FA
Real-time, integrations	SignalR, Socket.IO, WebSockets, Stripe, Google Maps, ArcGIS, Google Calendar API, DocuSign, MailKit
Architecture, practice	Multi-tenant, layered and event-driven architecture, DDD, caching, feature toggles, resilience (Polly), unit and integration testing, .NET and Vue.js migrations, Agile/Scrum, Git

EXPERIENCE

EC Group International · Chennai

Feb 2022 – Present

Senior Software Engineer — Apr 2025 – Present

- Own end-to-end delivery across four enterprise products spanning ERP, SaaS and AI-powered platforms.
- Lead architecture and technical design through implementation, migrations, deployment and production support.
- Mentor four junior developers on code quality and technical growth.
- Build agentic AI features: RAG pipelines, MCP tool integrations and multi-agent workflows.

Software Engineer — May 2023 – Apr 2025

- Built features for multi-tenant SaaS and ERP products with C#, ASP.NET Core, TypeScript and Vue.js.
- Developed serverless and asynchronous workflows on Azure Functions, with CI/CD in Azure DevOps.
- Worked on real-time features, authentication and authorization, and database performance.

Trainee Software Engineer — Feb 2022 – May 2023

- Contributed to enterprise .NET and Vue.js applications, from bug fixes to complete features.
- Wrote unit and integration tests and supported production releases.

Systems delivered

AI-powered data platforms
LLM-driven semantic field mapping with confidence scoring and human-in-the-loop review; configurable schema, business and relationship validation; data enrichment; RAG over vector stores and knowledge graphs; tools exposed through MCP.

Result: analysts review only uncertain mappings instead of every field; bad data is caught before it lands.

.NET 8, Vue.js, Azure OpenAI, LangGraph, LangChain, Pinecone, Neo4j, MCP, CopilotKit

Multi-tenant enterprise platforms
Versioned REST APIs on a layered, domain-driven design; automated tenant database provisioning and schema migrations; background jobs; resilient integrations; multi-IdP policy-based authorization; real-time updates and feature toggles.

Result: tenants and schema changes ship through the pipeline, not by hand; transient integration failures retry automatically.

C#, ASP.NET Core, EF Core, SQL Server, DbUp, Hangfire, Polly, SignalR, OIDC, Vue.js

Compliance and ERP applications
SPAs, APIs and real-time features for compliance-critical regulatory workflows; Stripe subscription billing; geospatial site data; queue-based document processing on serverless infrastructure.

Result: self-service billing and map-based compliance tracking; heavy document jobs no longer slow the app.

React, TypeScript, TanStack, Node.js, Express, MongoDB, Socket.IO, Durable Functions, Stripe, ArcGIS

Business workflow applications
Role-based access control, rule-based recurrence, calendar views, reusable components, rich-text document and report generation, and logging and validation for faster troubleshooting.

Result: reports once assembled by hand come out of the app; issues are traced faster.

C#, ASP.NET Core MVC, EF Core, SQL Server, Azure Functions, Vue.js, CKEditor

Hexaware Technologies · Coimbatore Oct 2020 – Jun 2021
Executive

- Client-facing role in sales operations that built communication and stakeholder skills.

PROJECT

Multi-Agent Orchestration System TypeScript · Vercel AI SDK · OpenRouter · MCP · pgvector

- Layered platform: API gateway, agent orchestrator, tool router and MCP tool registry, with shared memory and RAG on Postgres + pgvector.
- Orchestrator plans requests into steps and delegates them to agents; multiple LLMs sit behind one interface via OpenRouter.
- Code: github.com/Yuga-Dev/orchestrator
